ES / 5RXV

E-mini S&P 500 | ESU6 | 14 JUN - 04 SEP 2026

36,128 completed bars / 11,497 reversal events / 60 trade dates

AT LEAST 1 FOLLOW-THROUGH

75.9%

A reversal followed by 1+ same-direction candle.

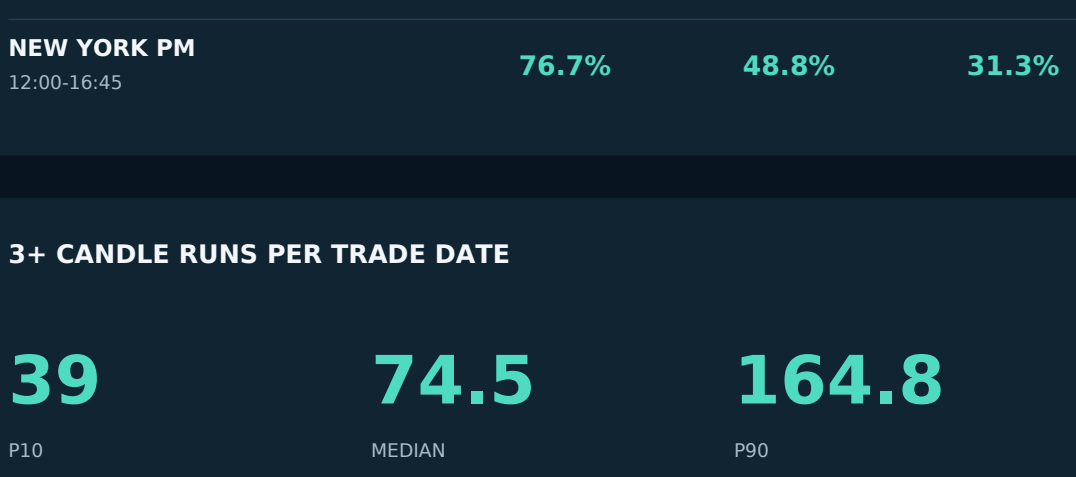
AT LEAST 2 FOLLOW-THROUGHS

48.9%

A reversal followed by 2+ same-direction candles.

HOW FAR DOES A REVERSAL EXTEND?

Extra candles after the reversal • all-hours event rates



THE SHAPE OF A RUN

Same-direction candles • completed runs

2	6	23
MEDIAN	P90	OBSERVED MAX

Exactly 3 candles	17.4%
3 or more candles	48.8%
Mean run length	3.14

P90: nine in ten completed runs are this long or shorter.

FOUR SESSIONS. FOUR DIFFERENT PACES.

New York time assumed • follow-through rates vs. frequency of 3+ candle runs

SESSION	≥1 FOLLOW	≥2 FOLLOW	≥3 FOLLOW	3+ RUNS / HR	MEDIAN / DAY 3+ runs	P90 / DAY 3+ runs
ASIA 20:00-03:00	77.0%	49.4%	33.0%	1.7	10	23.2
LONDON 03:00-09:00	77.2%	49.9%	32.3%	2.6	14.5	24.4
NEW YORK AM 09:30-12:00	74.2%	48.5%	30.8%	13.2	28.5	60
NEW YORK PM 12:00-16:45	76.7%	48.8%	31.3%	5.4	17.5	41.4

3+ CANDLE RUNS PER TRADE DATE

39	74.5	164.8
P10	MEDIAN	P90

Mean 93.5 • All hours, 18:00-17:00 • Counts, not probabilities

WILL THE RUN ADD ONE MORE?

2 candles → 3	64.4%
3 candles → 4	64.4%
5 candles → 6	65.8%

READ THE SEQUENCE

Reversal + 2 follow-through candles = a 3-candle run.

A run is one streak, not overlapping three-bar windows. Run percentiles are not next-candle probabilities.

CANDLE CONTINUATION ≠ TRADE WIN RATE

Historical descriptive statistics only. No entries, stops, costs, slippage or executable fills are modeled.
Runs reset at session boundaries. Follow-through rates use horizon-specific right-censoring.
First/final boundary runs are excluded from exact completed-run distributions. One likely terminal bar is removed per trade date.
All-hours totals also include unlisted gaps. Clock-hour rates assume the stated session durations; timezone remains unconfirmed.
