ES / 6RXV

E-mini S&P 500 | ESU6 | 14 JUN - 04 SEP 2026

26,188 completed bars / 8,386 reversal events / 60 trade dates

AT LEAST 1 FOLLOW-THROUGH

74.7%

A reversal followed by 1+ same-direction candle.

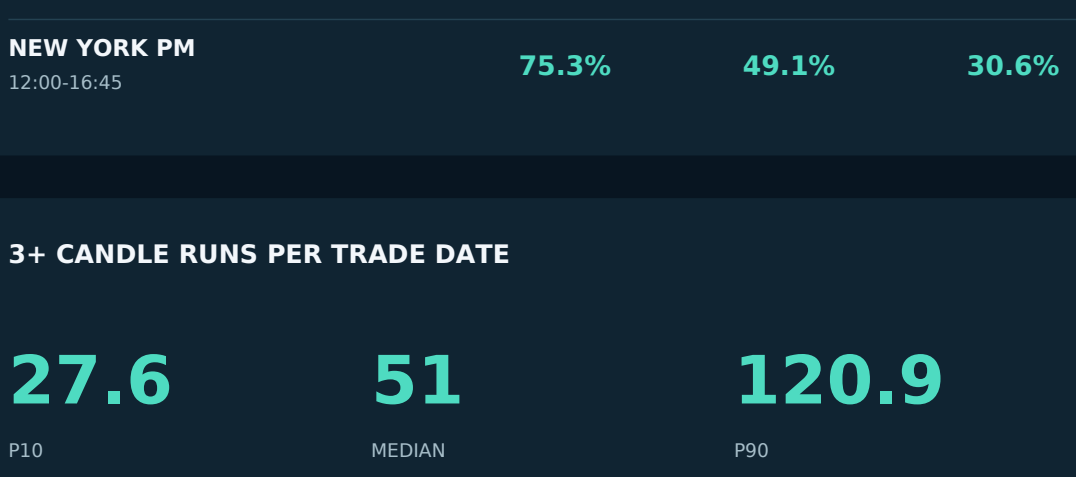
AT LEAST 2 FOLLOW-THROUGHS

47.9%

A reversal followed by 2+ same-direction candles.

HOW FAR DOES A REVERSAL EXTEND?

Extra candles after the reversal • all-hours event rates



THE SHAPE OF A RUN

Same-direction candles • completed runs

2	6	24
MEDIAN	P90	OBSERVED MAX

Exactly 3 candles	16.7%
3 or more candles	47.9%
Mean run length	3.12

P90: nine in ten completed runs are this long or shorter.

FOUR SESSIONS. FOUR DIFFERENT PACES.

New York time assumed • follow-through rates vs. frequency of 3+ candle runs

SESSION	≥1 FOLLOW	≥2 FOLLOW	≥3 FOLLOW	3+ RUNS / HR	MEDIAN / DAY 3+ runs	P90 / DAY 3+ runs
ASIA 20:00-03:00	77.0%	50.0%	35.2%	1.2	7	15.4
LONDON 03:00-09:00	74.9%	46.3%	30.6%	1.8	10	20
NEW YORK AM 09:30-12:00	73.7%	47.1%	30.7%	9.3	20	43.1
NEW YORK PM 12:00-16:45	75.3%	49.1%	30.6%	3.9	13	30.2

3+ CANDLE RUNS PER TRADE DATE

27.6	51	120.9
P10	MEDIAN	P90

Mean 66.9 • All hours, 18:00-17:00 • Counts, not probabilities

WILL THE RUN ADD ONE MORE?

2 candles → 3	64.3%
3 candles → 4	65.2%
5 candles → 6	65.9%

READ THE SEQUENCE

Reversal + 2 follow-through candles = a 3-candle run.

A run is one streak, not overlapping three-bar windows. Run percentiles are not next-candle probabilities.

CANDLE CONTINUATION ≠ TRADE WIN RATE

Historical descriptive statistics only. No entries, stops, costs, slippage or executable fills are modeled.
Runs reset at session boundaries. Follow-through rates use horizon-specific right-censoring.
First/final boundary runs are excluded from exact completed-run distributions. One likely terminal bar is removed per trade date.
All-hours totals also include unlisted gaps. Clock-hour rates assume the stated session durations; timezone remains unconfirmed.
